

Mechanical Design Engineer

Anncy, France | R&D | Unsolicited application

CIXI is an automotive start-up company. Our mission is to develop a new type of electric vehicle combining the benefits of a car and those of a bicycle, allowing people to be active during their daily trips and reduce their environmental footprint.

We are always open to meet talented **mechanical design engineers**, who are willing to commit to our project and to be in charge of developing one of our major mechanical subsystems. The scope ranges from the definition phase to the prototype validation.

Typical missions

- Hold the project responsibilities: resources, planning, deliverables
- Define and maintain the list of specifications of your system
- Carry out the sizing and design of your system
- Build, maintain and improve your prototype
- Design and perform bench and road tests to validate your design

Your profile

- You have a Bachelor or Master degree in Mechanical Engineering and/or a relevant experience related to our project
- You have a strong mathematical background
- You can build prototypes and think with your hands
- You have excellent problem-solving skills and are eager to learn fast
- You have a good level in English and French

At CIXI we value **engagement, intellectual honesty, and kindness**. We are currently a team of 20+ people, and each of us is an important pillar for the creation of the Hyfit.

Do you think you can bring new skills and your expertise to our project?
Send us your resume and a personalized cover letter at jobs@cixi.life, we will get back to you soon!
